

Convenient Location

Strategically located in Indiana and the ability to service throughout North America.

Service Offerings

We provide specialized cementing units and custom slurries complemented by laboratory testing services for deep completions, remedial work, and abandonment operations.

Deep Experience

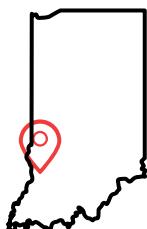

- 40+ Years of Experience – Thousands of wells completed with precision.
- Regional Expertise – Knowledge of reservoir formations for zonal isolation.
- Safety & Compliance – Commitment to regulatory standards and environmental protection.

Engineered Cementing Solutions

Franklin Well Services, based in Indiana, delivers premium drilling fluids, cementing, stimulation, and completion services with over 40 years of industry experience. Our regional expertise combined with cutting-edge technology optimizes well performance across thousands of successful completions. We prioritize safety, efficiency, and environmental stewardship to provide cost-effective solutions for both conventional and carbon sequestration projects. Our expert team and advanced equipment ensure customized, reliable services that adapt to the oil and gas industry's changing demands.

400 Main Street
Vincennes, IN 47591

Reliable Innovative Proven

Franklin Well Services delivers unmatched cementing excellence through our unique blend of industry experience and advanced technology, all backed by rigorous safety protocols. We specialize in providing custom zonal isolation solutions that maximize wellbore integrity across conventional, CCUS, and geothermal applications—ensuring reliable, efficient, and economical results precisely matched to your project specifications.

Specialized Services

► Cement Services

Pressure pumping equipment includes small pumping units for compact locations to the rigors of challenging zonal isolation treatments that demand the reliability of a twin-pump unit. Whether a well for oil, gas, deep injection, or even municipal water wells, we deliver services where needed.

► Cement Systems

We offer a complete line of cement systems using ASTM and API cements for primary, remedial, and P&A applications. Additionally, we provide slurry designs for challenging CCUS and gas storage field projects.

► Cementing Products

| | |
|------------------------------------|-----------------------------|
| ASTM and API Cements | Spacer Systems |
| Thixotropic Cements | Fluid Loss Additives |
| Pozzolan Blends | Lost Circulation Materials |
| Class VI Well CO2 Resistant Blends | Centralizers, Shoes, Floats |

The FWS Cement Advantage

With over 40 years of specialized experience and thousands of successful completions, Franklin Well Services delivers premium zonal isolation solutions tailored to the industry's most demanding challenges. Our comprehensive suite of engineered cement slurries, specialized tools, and advanced pressure pumping capabilities ensures optimal wellbore integrity for every application.

We combine precisely formulated slurry designs with cutting-edge monitoring technology and dependable pumping systems to achieve perfect zonal isolation throughout your well. Beyond technical excellence, we focus on building enduring partnerships through operational reliability, sustainable practices, cost-effective solutions, and rigorous safety protocols. Partner with Franklin Well Services for cementing services that consistently exceed expectations and enhance long-term well performance.
